

Cleanroom Gripper Type

RCP2CR-GR

Dust-proof Gripper Type

RCP2W-GR

Cleanroom

Dust-proof

Cleanroom Type **ISO Class 4** (US FED STD Class 10) and Dust-proof Type **IP50** are now added to the lineup of the Two-fingered gripper RCP2-GRS/GRM and Three-fingered gripper RCP2-GR3SS/GR3SM series

Features

1 Cleanroom Type and Dust-proof Type Available

Cleanroom Type and Dust-proof Type are added to the gripper slider type. They are optimized for gripper use in cleanrooms and dusty environments.

What Cleanliness is ...

ISO Class 5 and ISO Class 4 are examples of the unit of the cleanliness. ISO Class 4 (0.1 μ m) indicates an environment with 10000 pieces of dust or less that are 0.1 μ m or larger in a 1m³ area.

What IP is ... Degree of Protection IP

It is the class specified in IEC standards for water-proof and dust-proof.

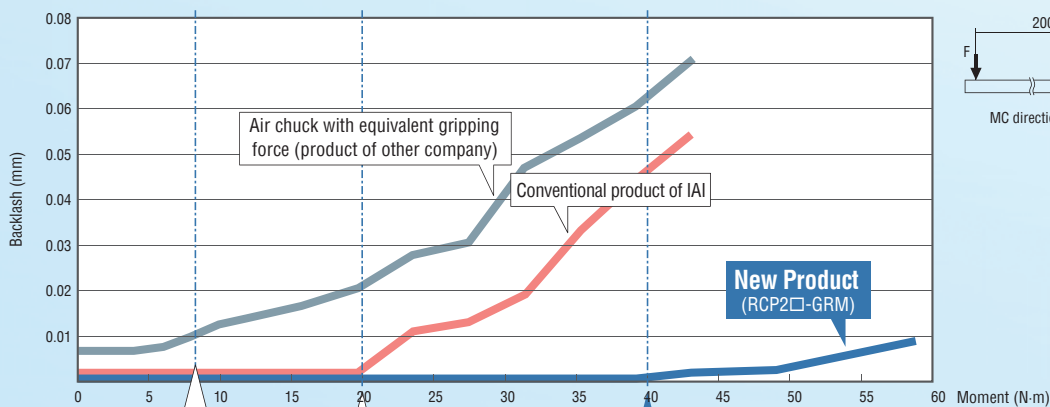

IP50	Solid Particle	Ingress of dust is not entirely prevented, but does not enter in sufficient quantity to interfere with the satisfactory operation of the equipment.
	Water	No protection provided against liquid

2 Upgraded Rigidity

By improving the structure of the base guide, fingers of RCP2□-GRS/RCP2□-GRM series have double backlash resistance against the load moment than the resistance of previous series. Situation assumes that a transient load exceeding the allowable load moment is being applied.

Measurement of backlash versus the moment load applied to the gripper fingers.

Allowable 8.3N·m (For RCP2□-GRM)
It is the allowable value of moment applied by gripping operation.

Backlash generated with three times the allowable moment on conventional product

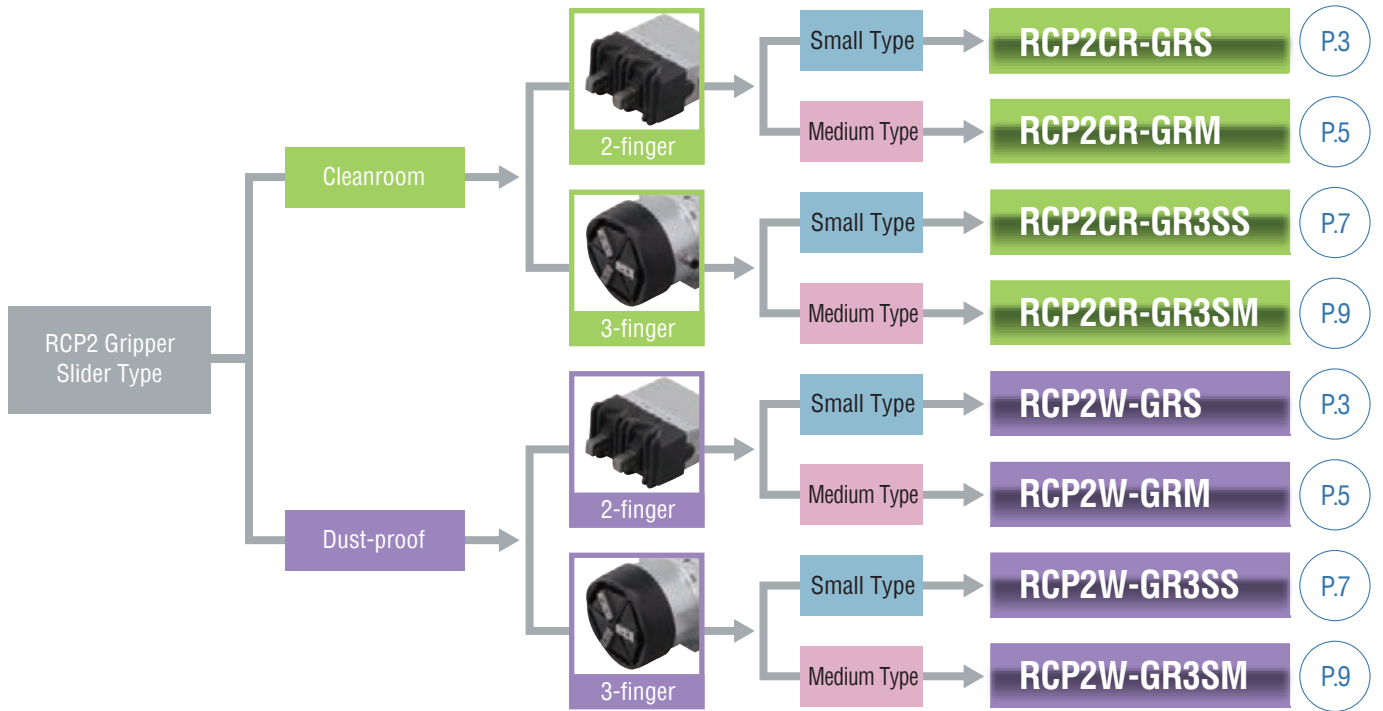

No backlash generated until five times the allowable moment of the new product is applied

<Note> Loads shown in the graph are not the allowable load. Applying a load exceeding the allowable moment might fault out the actuator which may significantly reduce product life or cause malfunction.

3 Supporting Multi-point Positioning, Adjustable Gripping Force

Up to 512 positioning points are supported via servo control, and the gripping force is adjustable. This makes it easy to adjust the finger opening/closing width at setup change and to grip easy-to-deform work parts.

Product Lineup

Product Specification

Specification	Series	Number of Fingers	Type	External View	Gripper Width (mm)	Opening/Closing Stroke (mm)	Max. Gripping Force (N)	See Page
Cleanroom	RCP2CR	2-finger	GRS		74	10 (5 per finger)	21 (10.5 per finger)	P.3
			GRM		79	14 (7 per finger)	80 (40 per finger)	P.5
		3-finger	GR3SS		62	10 (5 per finger)	22 (7.3 per finger)	P.7
			GR3SM		80	14 (7 per finger)	102 (34 per finger)	P.9
Dust-proof	RCP2W	2-finger	GRS		74	10 (5 per finger)	21 (10.5 per finger)	P.3
			GRM		79	14 (7 per finger)	80 (40 per finger)	P.5
		3-finger	GR3SS		62	10 (5 per finger)	22 (7.3 per finger)	P.7
			GR3SM		80	14 (7 per finger)	102 (34 per finger)	P.9

RCP2CR-GRS

Cleanroom RoboCylinder, 2-finger Gripper, Small Slider Type, 74mm Width, Pulse Motor

RCP2W-GRS

Dust-proof RoboCylinder, 2-finger Gripper, Small Slider Type, 74mm Width, Pulse Motor

Air Vacuum Joint

* The figure above shows the Cleanroom Type.
There is no air vacuum joint equipped on the Dust-proof Type.

- (1) The maximum opening/closing speed indicates the operating speed on one side. The relative operating speed is twice this value.
- (2) The maximum gripping force is the sum of the gripping forces of both fingers, at a gripping point where there is no offset or overhang distance. The work part weight that can be actually moved depends on the friction coefficient between the gripper fingers and the work part, as well as on the shape of the work part. As a rough guide, a work part's weight should not exceed 1/10 to 1/20 of the gripping force.
* The gripping point 0 should be the reference point of moment in the drawing.
- (3) Refer to "How to Select Gripper" at the end of the RoboCylinder General Catalog for how to select a gripper.
- (4) The rated acceleration while moving is 0.3G.

■ Correlation Diagram of Gripping Force and Electric Current Limit

By pressing motion, the gripping (pushing) force can be adjusted freely within the range of electric current limits of 20% to 70%.

- * Keep L1 within 50mm from the reference point of moment.
- * The gripping force in the graph below assumes that L1 and L2 in the figure above are zero. Also note that the gripping force is a sum of gripping forces of both fingers.

* The gripping force graph above shows reference numbers. Please allow margins up to ±15%.

* Please note that, when gripping (pushing), the speed is fixed at 5mm/s.

Actuator Specifications

- * The actuator pigtail is not a robot cable.

L-shaped vacuum joint specification

Weight (kg) 1.3

Applicable Controllers

The RCP2 series actuators can operate with the controllers below. Select the controller according to your usage.

Name	External View	Model Number	Features	Max. Pos. Points	Input Voltage	Power Supply Capacity
Solenoid Valve Multi-axis Type (PIO Specification)		MSEP-②-③---①-2-0 (Note)	Positioner type based on PIO control, allowing up to 8 axes to be connected	3 points	DC24V	See RoboCylinder General Catalog
Positioner Multi-axis Type (Network Specification)		MSEP-②-③---④-0-0 (Note)	Field network ready positioner type, allowing up to 8 axes to be connected	256 points		
Positioner Type High-output Specification		PCON-CA-42P⑤-①-2-0	Equipped with high-output driver Positioner type based on PIO control	512 points		
Pulse Train Type High-output Specification		PCON-CA-42PWAI-PL-□-2-0	Equipped with high-output driver Pulse train input type	-		
Network Type High-output Specification		PCON-CA-42P⑤-④-0-0	Equipped with high-output driver Supports 8 major field networks	768 points		
Pulse Train Type (Differential Line Driver Specification)		PCON-PL-42PI-①-2-0	Pulse train input type with differential line driver support	-		
Pulse Train Type (Open Collector Specification)		PCON-PO-42PI-①-2-0	Pulse train input type with open collector support	-		
Serial Communication Type		PCON-SE-42PI-N-0-0	Dedicated serial communication	64 points		
Program Control Type		PSEL-CS-1-42PI-①-2-0	Program operation is possible for up to 2 axes	1500 points		

* This is for the single-axis PSEL.

* ① indicates I/O type (NP/PN).

* ② indicates C/LC type. Up to 6 axes can be connected if LC is selected.

* □ indicates N (NPN specification) or P (PNP specification) code.

* ③ indicates number of axes (1-8).

* ④ indicates field network specification code.

* ⑤ indicates encoder type. Enter WAI for incremental specification and SA for simple absolute specification.

**RCP2CR/RCP2W Series
2-/3-Finger Gripper Type
